No. in row	Scope of monitoring	Report	
1	Grounds for conducting (According to the annual plan, etc.)	Contract No. CSBG-41SW-22/27-AGRI-0008/02.02.2023 for the implementation of a project under the CARBONSAFE carbon program.	
2	Inspector (Name, surname)	Hristo Nikolov	
3	Purpose of the monitoring (Inspection of the strategy performance)	Assessment of the actual condition of the areas participating in the program.	
4	Method of conducting (Direct observations, interviews with responsible officials, inspection of available/submitted records on the workplaces, by a representative sample)	On-site visits, interview conducted with the farmer.	
5	Results/findings (description of the actual situation)	The farm partially implements the agricultural practices set out in the individual strategy.	
6	Submitted documents/records and other findings (descriptions of provided materials)	IN-24.05.16-ПР0104-Технологична карта Борис Емилов Йотин.xls	
7	Established deviations and proposed corrective actions (description of the actual situation)	During the on-site visit, deviations from the agrotechnical measures set out in the individual strategy were found in the following fields: Сюргьовица;	

CARBONSAFE LTD city of Plovdiv, 53 Tsarigradsko Shose Blvd. Tel. +359 899 491 111; E-mail: office@carbonsafe.bg

		Синанчек 59,82 дка; Синанчек 63,06 дка; Равнака 151,52 дка; Равнака 114,58 дка; Друма - под пътя; Булехчица. The areas have been plowed, lack soil cover, and are subjected to wind, water erosion, and oxidation. This type of treatment leads to the
8	General evaluation, conclusions and recommendations.	loss of a significant amount of soil carbon. Efforts should be made to increase the amount of plant residues for mulching cover. More aggressive soil treatments should be scheduled as close as possible to the establishment of new crops. It is recommended to work towards ensuring year-round soil cover on the areas participating in the program with annual crops (intermediate and/or cover crops). The use of organic fertilizers, soil improvers, and biostimulants is
		recommended to improve soil health and fertility. The overall assessment is that the farm follows the prescribed practices in the individual strategy with some exceptions.

INSTRUCTIONS:

- Recommended soil treatments: Vertical treatments for mixing plant residues every 2-3 years, depending on weather conditions.
- Prohibited soil treatments: Plowing and overturning of soil layers.

GUIDELINES:

- Summer period from June 1 to October 31: Areas must have minimal soil cover, and plowing and overturning of soil layers are not allowed.
- Winter period from November 1 to February 15: Areas must have minimal soil cover, and plowing and overturning of soil layers are not allowed.

OBLIGATIONS:

 Every activity, including soil treatments, must be recorded with the corresponding execution dates in the technological map.

Date 10.05.2024 Agronomist: Hristo Nikolov
